

The Mag life devices are installed on the water lines as per the dia size of water pipes in your Dairy farm.

- Increase milk production upto 10%-15%
- Improve fat content of milk by 0.13%-0.15%
- Increase average weight gain of calves up to 10-35%
- Increase average weight gain of lambs up to 12%
- Animals that drink Mag life treated water develop significant resistance against diseases
- Improves fertility
- Product Life is at least 10 years

Benefits Mag life Treated Water

Mag life Treated water is biologically active and results in accumulation of proteins instead of fat in animals. For example, drinking Mag life Treated water by calves results in the formation of less fat deposits and high quality meat.

Dairy farmers and Breeders can benefit from a wide array of productiveness such as:

A. Milk:

- Increase milk production by 10%-15%
- Increase fat content of milk by 0.13 – 0.15% (standard fat content of milk is 3.2%)
- Mag life Treated water can also help in the sometimes difficult process of milking.
- It is not uncommon for a dairy animal's utters to be rigid, which slows down the milking process. Our method reduces the firmness of the utters and effectively makes it easier to milk.
- Mag life Treated water drastically decreases the amount of bacteria in milk.

B. Meat:

- Improve taste of meat
- Increase average weight gain in calves up to 10-35%
- Increase average weight gain in lamb up to 12%
- Increase in quantity of meat
- Improves quality of meat

C. Resistance against Diseases:

- Prevents diseases in animals caused by contaminated water and fodder
- Mortality ratio becomes negligible.
- Animals that drink Mag life Treated water also show signs of significant disease resistance.
- Gives protection against skin diseases
- Skin glows and shines.

D. Health:

- Improves metabolism of animals
- Removes nutrient-deficiency and maintains nutritional balance in animals
- Mag life treatment eliminates the Usage of harmful chemicals.
- When used for cleaning of sheds, Mag life Treated ater reduces germs and bacteria.

E. Commercial:

- The installations of special Mag life Devices will double the storage time (shelf life) of milk in containers.

F. Fodder production:

- Increase productivity
- Improve quality of fodder
- Mag life water maintains the balance and availability of nutrients in the plants

G. Breeding:

- Improves fertility
- Increase the reproductive performance of animals by making them more active.
